Absortech 公司潜心专注于帮助全球客户避免潮湿货损。自 1996 年以来,我们开发了 AbsorRange 系列干燥剂产品,我们为集装箱内、包装袋内以及家用环境提供创新的防潮保护技术。从用户的产品开发、制造、运输的全过程进行把控,确保在正确的地点交付高品质的干燥剂产品。公司拥有丰富的解决方案,帮助客户控制潮湿货损相关问题。我司集装箱干燥剂系列已经全部实现了碳中和,助力客户实现供应链减碳目标。

Ever since we were founded in Sweden in 1996, we have been driven by innovation. Initially, by developing desiccants based on calcium chloride as the absorbing agent. Recently, and increasingly important, we have developed a toolbox of services outlining which measures to take to prevent moisture damage. Correct use of desiccants reduces the environmental impact as a result of decreased scrapping or questionable pre- or re-work. What's more, most of our products in AbsorRange™ are now CO2-neutral. The calculations are 3rd party validated and the unavoidable CO2 is offset via Gold Standard-certified projects.

Today, Absortech is a truly global company. This means we can offer our products from seven

Absortech locations or via our global network of partners and distributors. Furthermore, a solid solution requires being present at both the departure and the arrival harbors, and this makes us the ideal partner for larger corporations.

SANTUS 帝泉贸易有限公司是一家新加坡公司，是以为人们带来全新生活方式为目标的创新型企业。首度涉猎领域是葡萄酒保鲜，团队历经数年研发和试验，经上百次修改调整，为大家带来了一代又一代高端葡萄酒保鲜机，以层层进阶的智能保鲜科技改变葡萄酒饮用传统，无论居家，餐厅，商业，办公等各种场景，都可随时乐享新鲜如初的美酒，喝出自己的节奏。

Conceived in 2013, SANTUS™ specializes in lifestyle products that make the timeless flavors of wine last longer. This empowers individuals to fully indulge in their love for wine by giving them more time to savor every sip - be it at home or elsewhere. Newly launched, the SANTUS™ Andante series is committed to the environment while reducing wine waste. Through the use of environmentally friendly materials, we hope to help our customers do more with less.

**主要展品 /Products**

SANTUS Andante 采用具备创新氧气吸附技术 (Oxygen Absorber) 的除氧滤芯，将瓶内氧气率有效降至 0.1%，可以在保证口感的同时将葡萄酒的最佳赏味期由 3 天延长至 14 天，确保每一滴酒在第 14 天时也能新鲜如初，让消费者掌握品酒的自由度，喝出属于自己的节奏。一个除氧滤芯可以支持约 8 瓶葡萄酒的保鲜。

Over 600million bottles of wine are wasted yearly in UK due to over-pouring or improper knowledge of wine storage. SANTUS Andante is using Oxygen Absorber to filter O2 from the air in the bottle, hence extending its taste and flavor for up to 14 days. Designed to look like a piece of art suitable for any settings, its translucent door subtly reveals the label of the wine in. Setting up is a breeze and dispensing wine is simply the touch of a button. The use of sensors and light strips in the machine allow users to be alerted as the strips count down the 14 days to wine expiry, all while enhancing its aesthetics. These alerts are further extended to WeChat, where you can also set the temperature to as low as 10°C for the White. Finally, we started this company with the end in mind, by taking a social responsibility route to reduce wine waste. We continue in this route by making sure where possible that our materials are environmentally friendly like being biodegradable or recyclable.

微型隔膜泵又叫微型真空泵、微型水汽两用泵,内部通过机械装置使泵内部的隔膜做往复运动,并且在进口处能够持续形成真空或负压,出口处形成微正压。

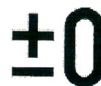

无刷直流水泵使用永磁无刷直流电机的原理,转子加上叶轮,外壳设计为液体流动的腔体结构,无碳刷摩擦。特点是安全高效,低功耗。较有刷电机寿命长,噪音低。

活塞泵又叫电动往复泵,结构分为单缸和多缸。活塞泵靠活塞往复运动,使得泵腔工作容积周期变化,实现吸入和排出液体。

Brushless DC pump using the principles of permanent magnet brushless DC motor, coupled with an impeller on its rotor, the housing structure is designed to constitute a cavity fluid flow, no carbon brush friction. It is characterized by safety, high efficiency and low power consumption. Compared with brush motor, this kind of pump has longer life span and lower noise.

Micro diaphragm pump refers to vacuum pump and is also called micro water-air pump, through the mechanical device to make the diaphragm reciprocating movement inside the pump, and it can continuous from vacuum or negative at the inlet and from the micro positive pressure at the outlet.

The piston pump is also called electric reciprocating pump, the structure is divided into single cylinder and multi cylinder. Piston pump by piston reciprocating motion, make the pump chamber work volume cycle change, realize the suction and discharge of liquid.

无刷直流水泵使用永磁无刷直流电机的原理, 转子加上叶轮, 外壳设计为液体流动的腔体结构, 无碳刷摩擦。特点是安全高效, 低功耗。较有刷电机寿命长, 噪音低。

微型隔膜泵又叫微型真空泵、微型水汽两用泵, 内部通过机械装置使泵内部的隔膜做往复运动, 并且在进口处能够持续形成真空或负压, 出口处形成微正压。

电磁泵是利用磁场和电流相互作用, 电流通过电磁绕组, 形成交变固定磁场, 推动柱塞往覆运动, 产生压力, 推动流体输出。

Brushless DC pump using the principles of permanent magnet brushless DC motor, coupled with an impeller on its rotor, the housing structure is designed to constitute a cavity fluid flow, no carbon brush friction. It is characterized by safety, high efficiency and low power consumption. Compared with brush motor, this kind of pump has longer lifepan and lower noise.

Micro diaphragm pump refers to vacuum pump and is also called micro water-air pump, through the mechanical device to make the diaphragm reciprocating movement inside the pump, and it can continuous from vacuum or negative at the inlet and from the micro positive pressure at the outlet. Electromagnetic pump is to use the interaction of magnetic fields and currents, the current through the solenoid coil, forming a fixed alternating magnetic field, push the plunger to cover sports, resulting in pressure to promote fluid output.

In 2015, Nikkiso successfully realized the mass production of the deep-ultraviolet LEDs which owns higher output power. In May 2021, Annuoqing equipped with the deep ultraviolet LEDs was officially launched in China. The deep ultraviolet LED irradiation in the product can destroy the helical structure of DNA or RNA of bacteria and viruses, and inactivate diseased bacteria and viruses. Despite the small size, it has a strong antibacterial and deodorant effect.

## 主要展品 /Products

yoose 设计了市面上第一款全合金机身、掌心大小的电动剃须刀, 采用金属材料、运用了电镀与汽车烤漆工艺来打破了市面上大部分剃须刀的固有状态。7200 转 /min 静音高速电机, 1 小时快充, 可用 30 天, IPX-7 级防水, 不惧全身水洗挑战, 长按开关旅行锁功能, 避免误触。内部元器件采用的高集成度的结构设计使得元器件与机身接触缝隙小于 0.5 毫米, 整体机身仅有蓝牙耳机大小, 将内部空间运用到极致。

yoose designed the first all-alloy body, palm-sized electric shaver on the market. It uses metal materials, electroplating and car paint processes to break the inherent state of most shavers on the market. 7200 rpm silent high-speed motor, 1 hour fast charge, 30 days available, IPX-7 waterproof, no fear of body washing challenges, long press the switch travel lock function to avoid accidental touch. The highly integrated structural design of the internal components makes the contact gap between the components and the fuselage less than 0.5 mm, and the overall fuselage is only the size of a Bluetooth headset, which maximizes the internal space.

VIP is superior to the traditional insulation materials:

1. Thermal conductivity can be as low as 1.5mw/mk which is improved by more than 10 times than traditional insulation materials (PU foam).
2. The thickness is only 1/5 ~ 1/10 of the traditional insulation material, the thin and lightweight of VIP make the insulation chamber lighter, insulation layer thinner to enlarge the use space.

### 主要展品 /Products

聚氨酯热熔胶是以聚氨酯树脂或预聚物为主体材料, 配以各种助剂而制得的一类热熔胶。因含有极性很强、化学活性很高的异氰酸酯基 (-NCO) 和氨基 (-NHCOO-), 与各种材料都有优良的化学粘接力, 且聚氨酯与被粘接材料之间产生的氢键作用会使高分子内聚力增加, 从而粘接更加牢固。1、9860 系列冰箱玻璃门板用胶; 2、3006 系列洗衣机顶盖用胶; 3、9867 系列烟机用胶; 4、EVA 发泡热熔胶。
